

Step 1: Prepare the Tools

1. **XAMPP Control Panel:** Open it and click **Start** for both **Apache** and **MySQL**. They must be green for your code to work.
2. **Visual Studio Code (VS Code):** Open this to write your code.
3. **Project Folder:** Go to C:\xampp\htdocs\ and create a folder named student_system.
4. **Open Folder in VS Code:** In VS Code, go to **File > Open Folder** and select your student_system folder.

Step 2: Set Up the Database

You need two tables: one for "Authorized IDs" and one for "Registered Users."

1. Open your browser and go to localhost/phpmyadmin.
2. Create a new database named **school_db**.
3. Click the **SQL** tab and paste this code to create your tables and add 3 test IDs:

```
CREATE TABLE authorized_students (  
    student_id VARCHAR(20) PRIMARY KEY  
);
```

```
CREATE TABLE users (  
    student_id VARCHAR(20) PRIMARY KEY,  
    password VARCHAR(255) NOT NULL  
);
```

```
-- Adding 3 correct IDs to the "Authorized" list
```

```
INSERT INTO authorized_students (student_id) VALUES ('ID-001'), ('ID-002'), ('ID-003'); islan  
mo ni tuod nga student id.
```

KADTO KA VSCODE. OPEN MO ANG FOLDER NGA ARA SA HTDOCS. ANG student_system

Step 3: Create the CSS (The "Green and Yellow" Design)

Create a file named style.css in your folder. This will make your pages look like the photos.

```

body { font-family: sans-serif; background-color: #f4f4f4; display: flex; justify-content: center; padding-top: 50px; }

.card { background: white; padding: 30px; border-radius: 15px; box-shadow: 0 4px 10px rgba(0,0,0,0.1); width: 350px; text-align: center; }

.logo { font-weight: bold; color: #004a99; font-size: 20px; margin-bottom: 20px; }

input { width: 100%; padding: 12px; margin: 10px 0; border: 1px solid #ddd; border-radius: 8px; box-sizing: border-box; }

.btn-blue { background-color: #004a99; color: white; border: none; width: 100%; padding: 12px; border-radius: 8px; cursor: pointer; font-weight: bold; }

.btn-outline { background: white; border: 1px solid #004a99; color: #004a99; width: 100%; padding: 12px; border-radius: 8px; margin-top: 10px; cursor: pointer; }

.success-box { background-color: #d4edda; color: #155724; padding: 10px; border-radius: 8px; margin-bottom: 15px; border: 1px solid #c3e6cb; }

.error-box { background-color: #fff3cd; color: #856404; padding: 10px; border-radius: 8px; margin-bottom: 15px; border: 1px solid #ffeeba; }

```

Step 3: Registration Phase 1 - ID Verification (verify.php)

This matches your first screenshot. No password is asked here.

```

<?php

session_start();

$conn = mysqli_connect("localhost", "root", "", "school_db");

$error = "";

if (isset($_POST['verify'])) {

    $sid = $_POST['student_id'];

    $auth = mysqli_query($conn, "SELECT * FROM authorized_students WHERE student_id = '$sid'");

```

```
$exists = mysqli_query($conn, "SELECT * FROM users WHERE student_id = '$sid'");

if (mysqli_num_rows($auth) == 0) {
    $error = "Student ID not found.";
} elseif (mysqli_num_rows($exists) > 0) {
    $error = "This ID is already registered.";
} else {
    $_SESSION['verified_id'] = $sid;
    header("Location: create_account.php");
}
}
?>

<!DOCTYPE html>

<html>

<link rel="stylesheet" href="style.css">

<body>

<div class="card">

    <div class="logo">CPSU VICTORIAS</div>

    <h3>Verify Student ID</h3>

    <?php if($error) echo "<div class='error-box'>$error</div>"; ?>

    <form method="POST">

        <input type="text" name="student_id" placeholder="e.g., 2024-00001" required>

        <button type="submit" name="verify" class="btn-blue">Verify Student ID</button>

    </form>

    <p>Already have an account?</p>

    <button onclick="location.href='login.php'" class="btn-outline">Login</button>
```

```
</div>
</body>
</html>
```

Step 4: Registration Phase 2 - Create Account (create_account.php)

This page only opens if the ID was verified.

```
<?php
session_start();

if (!isset($_SESSION['verified_id'])) { header("Location: verify.php"); }

$conn = mysqli_connect("localhost", "root", "", "school_db");

if (isset($_POST['register'])) {

    $sid = $_SESSION['verified_id'];

    $user = $_POST['username'];

    $email = $_POST['email'];

    $pass = password_hash($_POST['password'], PASSWORD_DEFAULT);

    $sql = "INSERT INTO users (student_id, username, email, password) VALUES ('$sid',
    '$user', '$email', '$pass)";

    if (mysqli_query($conn, $sql)) {

        unset($_SESSION['verified_id']);

        echo "<script>alert('Account created successfully!');
        window.location='login.php';</script>";

    }

}

?>

<!DOCTYPE html>
```

```
<html>

<link rel="stylesheet" href="style.css">

<body>

  <div class="card">

    <h3>Create Account</h3>

    <div class="success-box">Student ID: <?php echo $_SESSION['verified_id']; ?></div>

    <form method="POST">

      <input type="text" name="username" placeholder="Username" required>

      <input type="email" name="email" placeholder="Email Address" required>

      <input type="password" name="password" placeholder="Password" required>

      <button type="submit" name="register" class="btn-blue">Create Account</button>

    </form>

  </div>

</body>

</html>
```

Step 5: The Login Form (login.php)

This provides the "Create New Account" button for people who haven't registered.

```
<!DOCTYPE html>

<html>

<link rel="stylesheet" href="style.css">

<body>

  <div class="card">

    <div class="logo">CPSU VICTORIAS</div>

    <h3>Welcome Back</h3>

    <form action="process_login.php" method="POST">
```

```
<input type="text" name="username" placeholder="Username" required>
<input type="password" name="password" placeholder="Password" required>
<button type="submit" class="btn-blue">Login</button>

</form>

<hr><p>OR</p>

<button onclick="location.href='verify.php'" class="btn-outline">Create New
Account</button>

</div>

</body>

</html>
```

Step 6: How to Run and Test

1. **Open Browser:** Go to http://localhost/student_system/register.php.
2. **Test 1 (ID Not Found):** Type ABC-123. It should show the "Student ID not found" error.
3. **Test 2 (Success):** Type ID-001. It should show "Registration Successful".
4. **Test 3 (Existing Account):** Try to register ID-001 again. It should show the "Contact administrator" error.

Since you have already created `earchive_db` in **phpMyAdmin**, you have two choices for how to handle your school/user data.

While you **can** create a separate `school_db` for your users, it is usually more efficient to keep them in the same database since the Admin side (Earchive) needs to manage those same users.

Here is the step-by-step process for either path you choose:

Option 1: The "Unified" Database (Recommended)

Instead of a new database, you simply add a `students` or `users` table inside your existing `earchive_db`.

1. **Open phpMyAdmin:** Click on your `earchive_db`.
2. **Create User Table:** Create a table that matches your "Create Account" design.
3. **Fields needed:**
 - `student_id` (To match your "Official Student ID" verification page).
 - `fullname`.
 - `email`.
 - `password`.

Option 2: The "Separate" `school_db`

If you want a completely separate database for the `Student_system` folder, follow these steps:

1. Create the New Database

- Go to `localhost/phpmyadmin`.

- Click **New** and name it `school_db`.

2. Configure the "Student Side" Connection

In your `C:/xampp/htdocs/Earchive/Student_system/` folder, create a file named `config.php`:
PHP

```
<?php
// This connects the Student side to the School DB
$conn = new mysqli("localhost", "root", "", "school_db");

if ($conn->connect_error) {
    die("Connection failed: " . $conn->connect_error);
}
?>
```

3. Connect the Admin side to BOTH

In your `Earchive` folder (Admin side), you will need two connection scripts:

- One for `earchive_db` (to manage the research papers like the "Solar-Powered Rice Yield" one).
- One for `school_db` (so the Admin can see which students have registered).

Which should you choose?

- **Choose Option 1** if you want it to be easier to code. Having one database makes your PHP scripts much simpler.
- **Choose Option 2** only if you are simulating a real-world scenario where the "School Registry" and the "Library Archive" are two totally different departments.

Would you like me to show you the SQL code to create the "Students" table so it perfectly matches the fields in your "Create Account" screenshot?
