EXECUTIVE SUMMARY

The Automated Statistical Records System of Victorias City, Negros Occidental was developed to help not only the Barangay Nutrition Scholars to ease their work in terms of gathering of statistical data but also the City Planning and Development Office employees to keep the statistical records of the city safe and secure.

This system was also evaluated by the main users and they graded this system based on the criteria if the system is user friendly, contains accurate record, it is reliable if it performed well and has security in every data. Fortunately, this system meets all the criteria needed.

The general objective of this system was to replace the manual system into an automated one. The system provides a graphical presentation for easy viewing of the records which the viewers intended to know. The primary purpose of this system is to help the community in improving their organization better which is will give them have an edge among other cities, which are not using the automated system. The system can store a large quantity of statistical data. By using this system, it really helps not only the Barangays but also the City of Victorias in terms of statistics.

Specifically the system aimed to secure the data and information of each barangay in Victorias City, produce the Statistical Information of all barangays as basis for development, lessen the work load of the CPDO statistical population education in-charge and provide secured database for future used.
