EXECUTIVE SUMMARY

This capstone project entitled MAER or Mobile Automated Event reminder was created in XAMP and Android Studio so that users will find it easy to use this application since it used portable hotspot to share the application. Moreover the application provides ease in sending reminders to students and personnel regarding various upcoming events and important announcements of CPSU-Victorias Campus. It also has the capability to review the past events posted in the application.

This system was design as notify the students, the faculty and the staff of CPSU- Victorias Campus of the upcoming events through notification. This MAER or Mobile Automated Event reminder have a remind the users through text notification before and on the date the event is held. It can save time and energy in sending important instant push notifications and provide a reliable application and a secure database.

The concern of this project is to develop an application entitled MAER (Mobile Automated Event Reminder) with push notification to remind the parents, the students, the faculty members and the staff of the upcoming events of CPSU-Victorias Campus.

The researchers recommendation for the improvement of the system, the implementation plan, and the budget recommendation for the implementation of the system.

The researchers did the public demonstration at the computer laboratory about their system with the presence of the students and I.T Instructors. They explained on how the project works and the purpose of the project.
