EXECUTIVE SUMMARY

This project entitled Class Scheduling for Central Philippines State University Victorias University Campus is intended to improve the existing scheduling system, to develop a computerized scheduling, and to lessen the time and effort in making instructors' and student's schedules manually every semester. The automation of such task is what the researchers wish to resolve through the development of a scheduling system.

This aims to develop and implement a computerized scheduling system to aid the faculty members, the students, and the registrar in securing, storing and making students schedules. It is focused on the design, development and implementation of a working class scheduling that will be implemented by all faculty members.

The system focused only on the process of making and displaying schedule of the regular students in different courses and year respectively. Computations of grades, account statements, and billing or payments are not part of this project.

The concern of this project is to improve the scheduling system of the school through the help of computer. The respondents of this project were the faculty members especially the instructors. This will benefit the students and specially the instructors of the said institution. This project was conducted and implemented in Central Philippines State University - Victorias University Campus.
