## ABSTRACT

**REYLAN C. DELA CRUZ AND JOHN CLIVE S. DELA TORRE** of Central Philippines State University – Victorias Campus. August 2024. Challenges and Opportunities in farming encountered by Agrarian Reform beneficiaries in Victorias City  
**Adviser: Myro B. Ramos**

Agrarian reforms are measures that aim at changing power relations. By abolishing large landed property and feudal production systems, the rural population should be appeased and integrated into society, and this would contribute to the political stability of the country. This descriptive- comparative research was conducted to a 109 farmers in Victorias City. The study found that in Victorias City, the majority of agrarian reform beneficiaries were male (77.1%) and aged 61 and above (30.3%). Most had an educational attainment of elementary graduate (35.8%) and a monthly income of 5,000 pesos or below (55.0%). Additionally, a significant portion owned 1 hectare or more of land (53.2%).

Regarding in challenges in farming, issues such as land cultivation problems, climate change impact, low income, insufficient farming support, and lack of post-harvest facilities were common across all demographic groups except for variations observed based on age and land size acquired. Similarly, opportunities in farming, such as government agricultural incentives, crop insurance, modern agriculture practices,

utilization of acquired land, and government support, were uniformly perceived across demographic categories but showed differences based on age and land area owned.

The research finding revealed that in challenges in farming, farmers has less knowledge in appropriate usage of fertilizer, has insufficient income to support land cultivation and to buy some things needed in farming. The implication of this study could be used to promote awareness and seminar of fertilizers to farmers.
