ABSTRACT

Trecia Ann R. Añolga, Lizbeth D. Valdez, Teresita D. Roces, Central Philippines State University – Victorias Campus, Victorias City Negros Occidental, August 2024, Assessment on Food Sustainability Practices of Local Restaurant.

Restaurant owner are the primary beneficiaries of the study because they are the one who will benefit or be affected by it. The aim of the study is to assess the food sustainability practices of local restaurant in Victorias City. The study was conducted at Bok's Seafood and Resto Bar July 2023. The descriptive-comparative method was used in this study. The researchers-made questionnaire has been used to gather the desired data from the participants. Appropriate statistical tools such as frequency and percentage contribution, as well as mean and standard deviation; have been used in this study. The results revealed that customers and staff of all ages have equal access to services and interest in food quality, food safety and food waste, or that there are no specific age-related barriers that affect their participation. Moreover, based on the mean score and standard deviation of items questionnaire in determining the assessment on food sustainability practices of local restaurant, the results revealed that food quality, food safety and food waste of customers and staff were interpreted as Very High Extent. The findings showed that theory of planned behavior and innovation adaption theory used in this study relevant to the outcome of the finding. The theory of planned behavior places a strong emphasis on the thoughts and attitudes of restaurant owners when considering increasing green practices initiatives in the establishment. However, innovation theory contributes to explore restaurants behavioral intention towards adopting green practices.

The study's results revealed there is no significant in terms of demographic profile of staff to food quality, food safety and food waste and customer to food quality and food safety. Thus, there is significant difference on food waste in terms of educational attainment. This shows that when it comes to food waste the customer's level of education affects the engagement to wasted food. The research recommends owners to carry out necessary steps to use in his or her establishment such as using eco-friendly materials in packaging and serving meals. Furthermore, acknowledge the customers suggestions and demands when it comes to delivering providing food and services. This manuscript serves as a guide needed by the future researchers for future study.
